

RUBBER CUSHIONED MAST- ARM HANGER

OVERVIEW

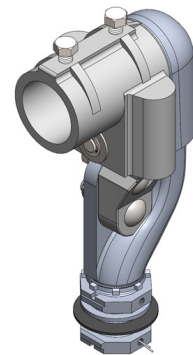

Traffic Hardware + Design's Rubber Cushioned Mast Arm Hanger is the best single point hanger on the market. The many thousands of units that have been installed have demonstrated trouble-free reliability.

Our patented design utilizes heavy duty rubber cylinders to dampen the stresses placed on signal heads and mast arms. In high winds, the rubber cushioned design allows for a controlled movement for the signal head through a maximum of 15 degrees from the vertical position, preventing the wild swinging motion that is sometimes evident with other spring hangers.

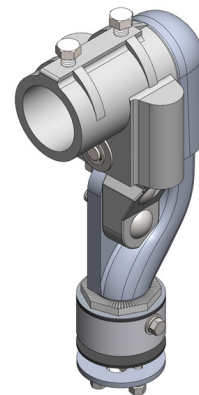

The hanger is made from a strong and durable primary grade aluminum alloy. The dense rubber cylinders inside will not degrade or lose their effectiveness, even after many years of service. The rubber inserts have excellent resistance to mechanical abrasion, and maintain their resiliency even at very low temperatures.

FEATURES—RUBBER CUSHIONED MAST ARM HANGER

- Easy wiring access
- Installation friendly
- No spring fatigue
- Patented rugged design
