

POST TOP SLIPFITTER

OVERVIEW

Traffic Hardware + Design offers their Post Top Bracket as an alternate method for mounting signal heads. Post tops are mainly used in temporary intersections, parking lots, check out booths, etc., and where access to conventional side-of-pole mounting is unavailable and/or prohibited. The Post Top has high shoulders allowing the installer easy access to the set screws from any angle with a standard wrench or socket, removing the requirement for an additional allen key.

Made out of durable primary grade cast aluminum, the post top fitting sits on a 4 1/2" diameter post. The fitting contains four stainless steel machined shoulders with set screws that are used to fasten the post top fitting on the post. With a combination of extruded aluminum arms and elbows, you can mount multiple signal heads.

FEATURES—POST TOP SLIPFITTER

- Ease of installation
- Strong & durable
- Mounting for multiple signals
- Interior rim to allow full contact with the entire pole
- High shoulders with hex bolt set screws eliminates the need for allen keys
