

POLYESTER SIGNAL JACKET

OVERVIEW

Polyester signal covers or signal “jackets” are the industry’s professional choice for shielding signal heads. Whether it is a new installation or long term closure of an intersection, our signal jacket is a durable, reusable and easy alternative to traditional methods of using plastic or cloth bags. The heavy duty UV stabilized poly fabric make the jacket highly resilient to wear and weather. Since the jacket is custom fitted to signal heads (both three and four section respectively) it will stay put and provide a cleaner and more professional look than a wind wavering bag.

The Signal Jacket like all of our products, was designed to make things simpler and easier. The custom fit eliminates the hassle of searching for bags or material large/small enough to adequately cover the signal. The Jackets cover the full face of the signal and overlap the back board by 125mm. A sewn in elastic fiber of 3.2mm holds the cover to the signal, while sheer mesh allows visibility for testing

Because the Jackets are so durable with a tensile strength of 400 MPa they are reusable. When it’s time for the signal to be uncovered the jacket can be stored and used again to cover other signals. This equals time and money saved in the future

FEATURES—SIGNAL JACKET

- Durable
- Custom Fit
- Reusable
- Acetal snap clips & steel grommets
